

Strategic and compliance auditing

Casualty Risk Management Services

Developing effective and transparent management systems for health and safety is critical in controlling risk, meeting stakeholder expectations and ensuring compliance. Also, monitoring health and safety performance against key indicators allows you to track and reduce your level of risk, demonstrate management commitment, encouraging a positive safety culture.

Our service

Our flexible approach can assess your organisation's compliance against a chosen performance standard determining the adequacy of current systems and resources. It also has wider applications across multi-site locations where performance standards need to be evaluated and compared using the same measures.

When measuring performance, the service can be customised for evaluation against statutory requirements, best practice or corporate performance standards – sharing our own perspective, knowledge and insight in relation to the management of health and safety.

Features and benefits

Our services:

- provide an independent and unbiased assessment of performance
- identify strengths and vulnerabilities of the management system

- provide information for the development of an improvement plan, measuring performance or demonstrating compliance
- ensure resources are directed to where they are most needed.

The service

Our services can include:

- thorough systematic reviews of processes, systems and documentation against a pre-determined standard
- interviews with key personnel, including line managers and employees
- provision of reports detailing key findings and recommendations
- optional workshops to develop strategic plans with key stakeholders
- an optional presentation of findings to main board.
