

Risk assessment

Casualty Risk Management Services

Planning for health and safety, along with having appropriate control measures in place, is crucial in preventing accidents. Effective planning systems should identify objectives and targets that are both attainable and relevant. They should also establish performance standards for the control of risks based on hazard identification and risk assessment.

Our service

Our range of risk assessment services includes the following:

- **Risk assessment review** – to measure the effectiveness of implemented risk assessment methods both from an operational and claims defensibility perspective.
- **Strategy development** – to provide guidance, information and assistance with the design of risk assessment strategies.
- **Training** – for risk assessors and others.

Features and benefits

Our services:

- provide an independent and unbiased assessment of performance
- identify strengths and vulnerabilities of any risk assessment approach

- provide information for the development of an improvement plan or enhancing approach
- cover both general and specific (for example, in relation to falls from height; noise and vibration; hazardous substances; manual handling) risk assessment strategies.

The service

Our services can include:

- thorough systematic reviews of processes, systems and documentation
- interviews with key personnel, including line managers and employees
- provision of reports detailing key findings and recommendations
- optional workshops to develop strategic plans with key stakeholders.
