

Supply Chain Risk Management

A holistic approach to supply chain risk management

Resilient supply chains are a key element of business success. Brexit, Climate Change, Covid-19 and increasing cyber threats, have created a perfect storm, with labour shortages, availability of transport and raw materials, and rising costs all impacting global supply chains.

Zurich Resilience Solutions can support you with a broad range of risk management solutions to help you build resilience across your supply chain.

Supply Chain Risk Assessment

Our supply chain risk assessment is designed to provide a deeper understanding of the vulnerabilities in your supply chain. It will enable you to build supply chain resilience where required, and to address vulnerabilities that could inhibit your ability to respond to today's risk challenges.

You can access our risk assessment tool for free by downloading the [Zurich Risk Advisor APP](#).

Critical Suppliers Risk Assessment

The supply chain risk assessment will identify critical assets and facilities that may include links within your suppliers or distribution network. Following the risk assessment, we can support you with understanding and assessing the risks within your suppliers' facilities which could have an impact on your own supply chain and business resilience. By completing assessments of the critical components within your suppliers, risks that may affect your capability to deliver can be identified and control measures considered.

Value Stream Analysis

Our value stream analysis will deep dive into specific processes and operations, exploring the whole supply chain network. It will enable you to visualise the bottlenecks and maintain flow and value.

Loss Scenario Workshop

Working with you through a realistic disruptive scenario, this workshop will test organisation resilience by exploring recovery options and the impacts on the supply chain profile. It examines how the business response aligns to insurance coverage and highlights any gaps or weaknesses.

Zurich Supply Chain Risk Management Services supported by AI

In collaboration with leading supply chain risk management software provider we can reduce organisation risk by creating a more resilient supply network. The software provides an early warning tool for monitoring and notification 24/7/365 of all sites, with immediate automatic alerts should your supply chain become compromised.

For more details, on any of our services, please speak to your usual Zurich contact or email:
