

Engineering Specialist Services – Assistance

Technical training

You can benefit from a proven approach to training that meets your specific needs, using our extensive experience, expertise and network to work for your business and help you to develop competency levels within your workforce.

What does the service include?

Our team of engineering specialists are able to deliver a range of training courses, from off-the-shelf courses to customised training programmes to suit your particular needs. Through our training programmes, our trainers are able to share their experience and in-depth technical knowledge.

We provide you with supporting notes and literature. In addition we can measure the effectiveness of the training to ensure you are achieving the results you want.

Some of the areas where we can assist include:

- The Provision and Use of Work Equipment Regulations and Lifting Operations and Lifting Equipment Regulations.
- The Pressure Systems Safety Regulations.
- The Pressure Equipment Directive.
- Boiler operatives.
- Interim inspection skills and risk assessment for lifting plant.
- Safe release of trapped passengers from lifts.
- Machinery directive.

Who does it affect and why?

Skilled employees who are well trained, competent and knowledgeable in their areas of responsibility are a valuable asset to your business. Providing your employees with the training they need is fundamental to implementing effective risk control systems.

Our approach

We will work with you to identify your business training needs. We will always discuss what you are hoping to achieve before recommending any specific training.

Where you are looking for something more than a standard training programme, we will design a course reflecting your company's particular equipment, infrastructure, working environment and working practices as appropriate.
